SINGLE WALL 316L SPECIAL GAS VENT

Accessories:

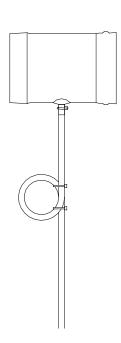

Horizontal/Vertical In-Line Drain Section — Use to drain away condensate from the vent system. The unique design of this part allows it to be installed in a horizontal, vertical or inclined orientation. Continuous horizontal runs in excess of 30 feet require a condensate drain. High temperature silicone rubber tubing is available separately, see below.

| | | | | |

Condensate Drain Tube Kit — This kit contains a length of high temperature silicone rubber tubing, a clamp, and two cable ties. The silicone tubing is rated for 500°F, and is translucent to allow inspection of the P-trap. Larger diameter drains can be plumbed directly into a drain system.

Part Number: 7000TUBE 5 feet of 3/8" diameter tubing

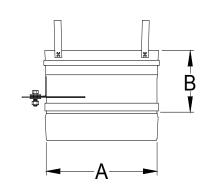

7000TUBE-10 10 feet of 3/8" diameter tubing 7001TUBE 10 feet of 1/2" diameter tubing

SINGLE WALL 316L SPECIAL GAS VENT

Accessories:

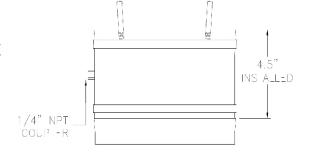

Blast Gate — Use to balance the draft of an appliance when the vent is terminated with a fan.

| Part Number | DIM - A Nominal Diameter | DIM - B Installed Height |

| 91201BG | 12 | 4.5 |
| 91401BG | 14 | 4.5 |
| 91601BG | 16 | 4.5 |

Probe Section — Use to attach probes to the vent system by means of a 1/4" NPT female fitting. Can be used vertically or horizontally. Comes with a 1/4" NPT plug.

Part no. 9 01PRB-316

Gasket Lubricant

It is <u>required</u> to apply gasket lubricant (p/n 7001SIL-5, sold separately) to the factory silicone gasket when assembling the pipe. Apply lubricant directly on the inside female pipe end, both edges of gasket. Reference installation manual.

| 91617-316 | 16 | 2.5 |

Tee Cover

Tee Cover with Drain Fitting — Use at the base of a tee or boot tee to drain away condensate from a vent system. This type of tee cover may also be used on the leg of a tee that is installed horizontally, to create a drain in a horizontal run. High temperature silicone rubber tubing is available separately from HEATFAB, see page 3.

Tee Cover with Drain Fitting

SINGLE WALL 316L SPECIAL GAS VENT

Tees, Boot Tees, & Covers:

Boot Tee — Use vertically or horizontally to add appliances into a common-vent system. When installed horizontally, the male end of the tee body may be capped off with a tee cover to allow for future appliances. When used in conjunction with a drain tee cover, the boot tee will effectively transition a vent system from a horizontal to a vertical orientation while allowing for proper condensate drainage. The pressure drop for this fitting is equivalent to 15 feet of vent. Other diameter configurations may be available; please contact Heat-Fab's Engineering Team to discuss your special needs.

^{*}Also available as a Sloped Boot Tee to allow for easier upward pitch in horizontal runs; p/nSB-316

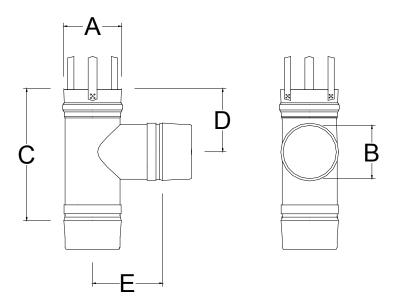

^{**}Lateral 45 deg Tees & Double Lateral Tees (aka Wye's and Double Wye's) are also available upon special request

SINGLE WALL 316L SPECIAL GAS VENT

Tees, Boot Tees, & Covers:

Conduit Tee — A conduit tee, when installed horizontally, may be fitted with a drain tee cover to create a condensate drain. Due to its high pressure drop, the conduit tee is generally not used to make a transition from horizontal to vertical. (Use a boot tee or an elbow.) The takeoffs are not removable on these tees.

| Part Number | DIM - A Nominal Body Diameter | DIM - B Nominal Tap Diameter | DIM - C Installed Length | DIM - D Centerline of Tap to Outlet | DIM - E Installed Distance from Tap to Body Centerline |

90° Elbow

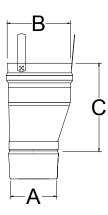

Also available as an 88 degree elbow to allow for easier upward pitch; p/n14E88-316 or14TRE88-316

SINGLE WALL 316L SPECIAL GAS VENT

Increasers & Reducers:

Increaser — Use to upsize a vent system. The term "increaser" is based on an increase in vent diameter in the direction of flue gas motion. Increasers are eccentric to allow for proper drainage of condensate when installed horizontally. Other diameter configurations may be available; please contact Heatfab's Engineering Team to discuss your special needs.

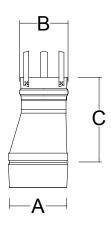

| Part Number | DIM - A Inlet Diameter | DIM - B Outlet Diameter | DIM - C Installed Length |

Increaser

Reducer — Use to downsize a vent system. A reducer may only be used when specified or allowed by the appliance manufacturer. The term "reducer" is based on an reduction in vent diameter in the direction of flue gas motion. Reducers are eccentric to allow for proper drainage of condensate when installed horizontally. Other diameter configurations may be available; please contact Heatfab's Engineering Team to discuss your special needs.

Adjustable Length — Use to accommodate distances not possible with the standard Saf-T Vent EZ Seal lengths. The slip connector serves as an adjustable section and eliminates the need to cut parts to length. The Slip Connector can have an installed length from 6 to 19 inches. It works best in conjunction with another straight length of Saf-T Vent EZ Seal. When used with an elbow or a tee, do not insert the Slip Connector so far that air flow within the vent becomes obstructed. When planning a venting system, include one slip connector for every change of direction and for any spans between two fixed points. Each slip connector comes with three components, a slip section, a male connector and a stainless steel hose clamp.

SINGLE WALL 316L SPECIAL GAS VENT

Supports:

Guy Support Section — Provides vertical support using a part that is a flue-gas-carrying component of the vent system. Guy sections are primarily installed in long, inaccessible chases or used to provide support to systems with extended lengths above the roof line. Attach the guy section using stainless steel or galvanized cables or chain (supplied by others). Refer to installation instructions for spacing between supports.

Guy Support Section

SINGLE WALL 316L SPECIAL GAS VENT

Supports:

1" Clearance Horizontal / Vertical Support — Provides support to 3" and 4" diameter Saf-T Vent EZ 316 systems with a 300°F maximum flue gas temperature. When any horizontal run of Saf-T Vent EZ 316 extends for more than 6 feet, a horizontal support must be installed. Subsequent supports are required after every additional 6 feet and every elbow and tee. **Never drill or screw through the Saf-T Vent EZ 316 conduit.**

The 1" clearance may be achieved ONLY when the vent is NOT fully enclosed -- there may be combustible material on a maximum of 3 sides. This support is not recommended for use in Canada unless additional provisions are made to insure that proper clearances are maintained. Combustible material is defined by the NFPA as any material that is capable of being ignited and burned. Common paper-faced sheetrock is considered a combustible material.

| 9923/2 | 9 | 4927SS | 2" Clearance Horizontal Support |
| 91023/2 | 10 | 41027SS | ••• |

2" Clearance Vertical Support — Use to provide support to Saf-T Vent EZ 316 systems while maintaining a 2" clearance to combustible materials. At a minimum, vertical supports are required immediately after any transition to a vertical run of over 10 feet, after any offset in a vertical run, and after every 30 feet of vertical run. These supports may also be used to support long horizontal runs, which require support every 6 feet.

SINGLE WALL 316L SPECIAL GAS VENT

Supports:

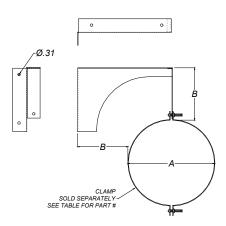

6" & 8" Clearance Horizontal Support — Provides support to 3" and 4" diameter Saf-T Vent EZ 316 systems. When any horizontal run of Saf-T Vent EZ 316 extends for more than 6 feet, a horizontal support must be installed. Subsequent supports are required after every additional 6 feet and every elbow and tee.

Never drill or screw through the Saf-T Vent EZ 316 conduit.

The 6" clearance horizontal support may be used in Canada on Saf-T Vent EZ 316 systems with a 300°F maximum flue gas temperature when the vent is NOT fully enclosed -- there may be combustible material on a maximum of 3 sides. The 8" clearance horizontal support may be used in the USA and Canada on Saf-T Vent EZ 316 systems with a 480°F maximum flue gas temperature when the vent is fully enclosed by combustible materials.

Combustible material is defined by the NFPA as any material that is capable of being ignited and burned. Common paper-faced sheet rock is considered a combustible material.

6" & 8" Clearance Horizontal Support

Support Hangers:

Support Clamp — For use on horizontal systems to provide support at the required 6-foot intervals. Support clamps by themselves do not maintain the necessary clearances to combustible materials; be sure to consider clearances when planning the system. Support clamps are sold in pairs, with two half-shells, and two 1/4-20 nuts and bolts. This part is made from 18-gauge Type 304 stainless steel and should not be installed in the direct path of flue gases. Refer to installation instructions for spacing between supports.

Never drill or screw through the Saf-T Vent EZ 316 conduit.

| Part Number | DIM - A Nominal Diameter | | |

SINGLE WALL 316L SPECIAL GAS VENT

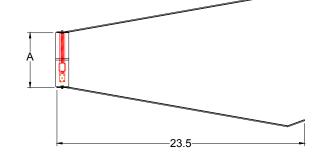

Supports:

Vertical Support Leg — For use on vertical systems to provide support. The 20-gauge stainless steel support legs can be used below or above the roof, and can be used in pairs for extra stabilization. Hardware to attach the support to the structure is not provided; attach using best construction methods. Be sure to consider clearances when planning the system.

Never drill or screw through the Saf-T Vent EZ 316 conduit.

May be also used horizontally.

Thimbles & Penetrations:

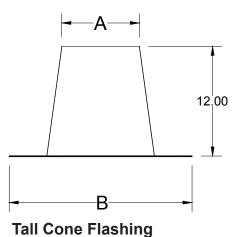

Roof Flashing— Standard roof flashings available from local plumbing suppliers may be used on Saf-T Vent EZ 316 systems with vertical terminations. To properly support the system separate supports may be required above or below the roofline.

Pitched Cone Flashing— For use with single-wall or double-wall Saf-T Vent systems with vertical terminations. Can be used on roofs with a 2/12 - 8/12 pitch. This part comes with a tall storm collar and is made of all stainless steel construction. On single wall Saf-T Vent applications the roof must be of non-combustible material. For sizes larger than 6" diameter the CI Plus/CI 316 Tall Cone Flashing can be used if the roof is of non-combustible material.

Wall Penetration & Horizontal Termination

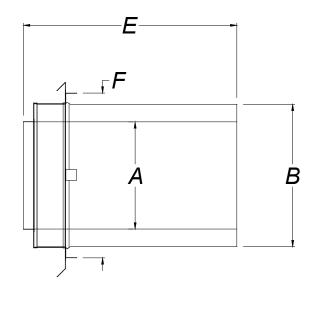

SINGLE WALL 316L SPECIAL GAS VENT

Thimbles & Penetrations:

Wall Penetration Assembly - without Screen — Use to penetrate any combustible or non-combustible wall. This part is a thimble only and does not include any vent. Order enough vent to pass through the thimble and extend at least 4 inches beyond a combustible building sheathing. The vent system may be terminated using any terminal Listed for use with the appliance. The design also allows a vent system to pass through a wall in order to install the vent up the outside of a building. The assembly may be painted to match the exterior decor.

Wall Penetration Assembly - without Screen

SINGLE WALL 316L SPECIAL GAS VENT

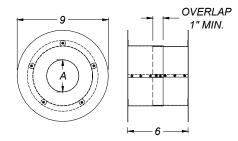

Thimbles & Penetrations:

Horizontal Wall Thimble — Use to penetrate any interior or exterior combustible or non-combustible wall. This part is a thimble only and does not include any vent -- be sure to order enough vent to pass through the thimble.

To use this thimble, the vent must be uninsulated for a minimum distance prior to passing through a combustible wall. A minimum distance of 18 inches is required for appliance flue gas temperatures up to 400° F. A minimum distance of 6 feet is required for appliance flue gas temperatures of 400 - 480° F.

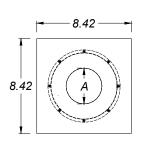

The opening must be 6-1/2 inches in diameter for both 3 or 4 inch diameter Saf-T Vent systems. The wall thimble is designed to adapt to any wall thickness from 3.5" to 6" thick. If the wall is thicker than 6", the thimble may be extended using a piece of 6" diameter snaplock or welded-seam galvanized pipe. The vent system may be terminated using any terminal Listed for use with the appliance. The wall thimble may be painted to match the decor.

Elbow Termination with Screen

SINGLE WALL 316L SPECIAL GAS VENT

Screen Termination — Use as a termination on horizontal or vertical systems, as specified or allowed by the appliance manufacturer.

Termination Accessories:

Storm Collar — For use on horizontal or vertical systems when a HEATFAB WALL or roof penetration is not used or is not required. The storm collar may be tightened and sealed around the vent to prevent water from entering the building. It may also be used as a decorative shield to cover holes where the vent penetrates interior concrete and masonry walls. This part is made from Type 304 stainless steel and should not be installed in the direct path of flue gases.

SINGLE WALL 316L SPECIAL GAS VENT

Terminations:

Rain Cap — Use as a termination on vertical systems. Category I and II appliances require a raincap or other device to prevent rainwater from entering the vent. Vent systems for positive pressure appliances may omit the raincap if there are other provisions for draining rainwater from the system. The raincap may also be used as a horizontal termination. Each raincap includes a storm collar that is used to attach the raincap to the vent system.
